

Game Pineapple (AI Edition) · User Manual

遊戲菠蘿 AI 版 · 使用手冊 · English

I. Game Configuration

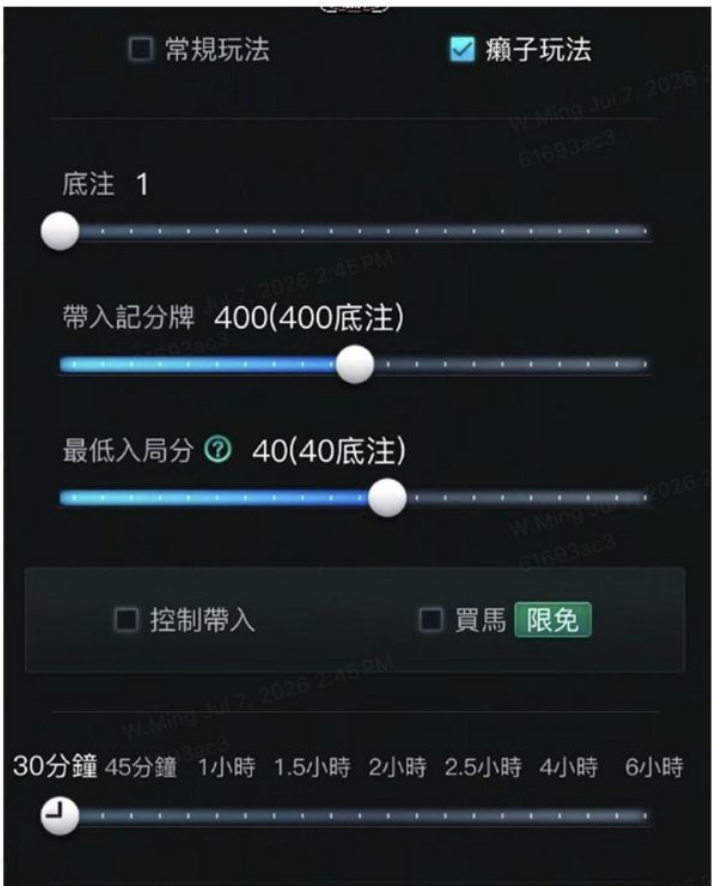

The game requires Android 9 or above; HarmonyOS and iOS are not supported.

Automation currently supports the "Blood-In/Blood-Out mode · Joker (Lai-zi) play · 17 cards" format.

Before installing a new version, uninstall the old one first, then configure the table as shown below.

Table: ante 1; buy-in 400 (400 antes); minimum entry 40 (40 antes); optional "controlled buy-in / horse bet / exemption"; round length 30 minutes to 6 hours.

Players: 2 / 3; three-of-a-kind range 16 / 17 cards; deal order "sequential / simultaneous"; arrange time 15 / 20 / 30 seconds.

II. Install LDPlayer

Download LDPlayer (<https://www.ldmnq.com/>); after installing, click "Multi-instance" to run several emulators at once.

On the emulator's right sidebar click "Install", then choose the APK file (transfer it from your PC to the emulator).

When the emulator desktop appears (with the Yu Poker icon), installation is complete and you can start.

III. Login & Usage

After logging into the AI edition, a shield icon on screen means it is working and configurable (below shows a multi-instance scenario).

Tap the floating window to open "Profile / Settings / Feedback"; the profile shows email, UID, Token, historical Token, remaining hands (estimated by Token strength), version, and login-expiry time.
