

Texas Hold'em (AI Edition) · User Manual

德州撲克 AI 版 · 使用手冊 · English

I. Install LDPlayer

The game requires Android 9 or above; HarmonyOS and iOS are not supported.

When registering, be sure to use a real email — you will need it to receive the verification code when logging into the Texas Hold'em AI app.

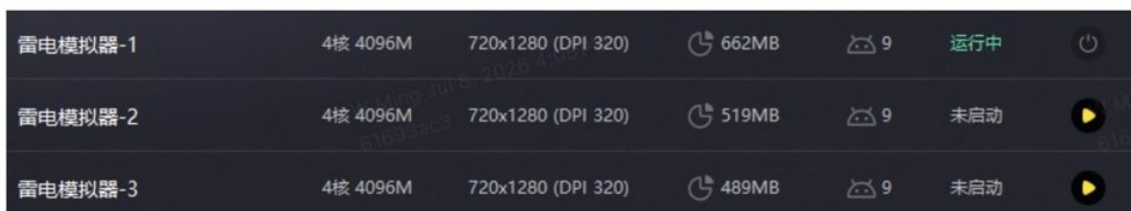

Download and install LDPlayer (<https://www.ldmnq.com/>); in the right sidebar click "Multi-instance", then choose "New" or "Clone" emulator.

When creating, choose the "Phone (portrait) 720 × 1280" resolution, then click "Create".

Click "Run" to open the corresponding window; you can run several instances at once.

In the right sidebar click "Install APK"; either pick a downloaded package or drag the APK straight into the current emulator.

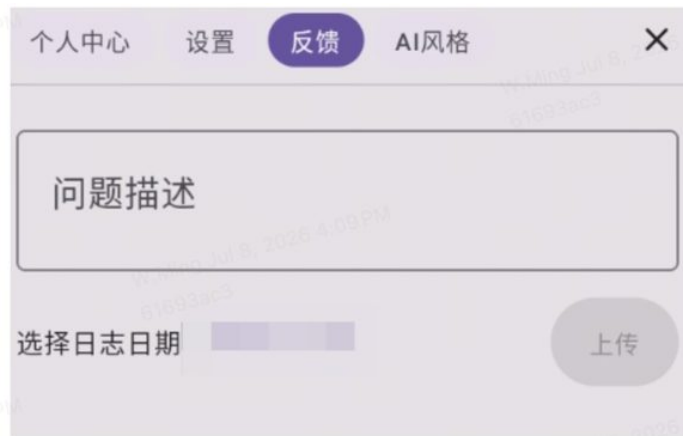

II. Register, Login & AI Account

After registering (a phone number is required) and logging in, tap the shield icon to verify your AI account by email; once logged in you can browse and configure.

"Profile" shows email, UID, Token, version, and login-expiry time, and lets you log out.

"Feedback" lets you enter a problem description, pick a log date, and upload it to report issues.

III. AI Style Settings (Important)

"AI Style" has "Original" and "Multi-style" — you can pick only one; choosing Original disables Multi-style.

Original style offers three options: shark / shark2 / smart2.

For Multi-style, each usual level allows only one choice: Aggressive / Balanced / Conservative (for ranges such as 36-16 and 30-20).

Teammate mode: when enabled, it supports data sharing among multiple accounts at the same table; every AI account at the table must enable it.
