

Mahjong Soul (AI Assistant) · User Manual

雀魂麻將 AI 助手 · 使用手冊 · English

I. System Requirements

Requires Android 9 or above. HarmonyOS and iOS are not supported yet.

II. Download

Go to <https://deeplab.pro/> → Products → Mahjong (Mahjong Soul) → download the APK, and wait for the download to finish.

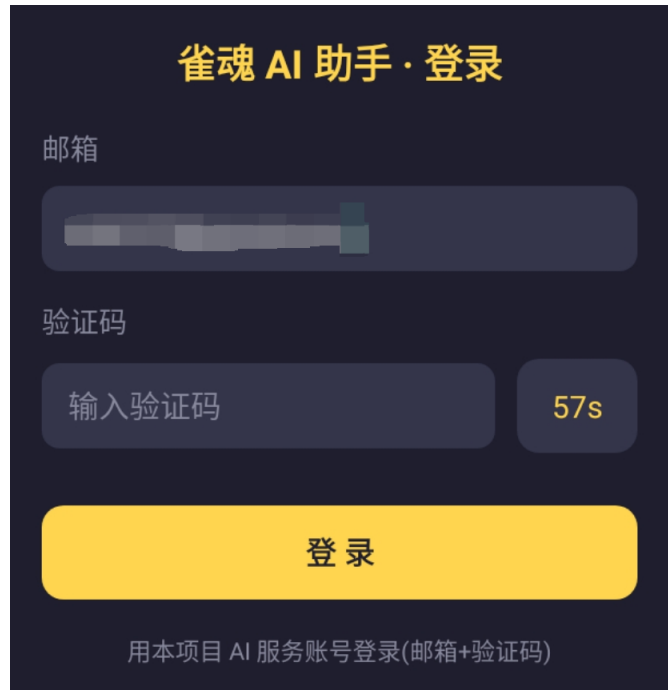

III. How to Log In

1. Open the game and finish registration; a D-shield icon appears on the left side of the screen.

2. Tap the D-shield icon, then log in with the email you registered and activated at <https://deeplab.pro/> — a verification code will be sent to that email.

退出登录

2. For AI assistance, log in on the <https://deeplab.pro/> homepage and go to Dashboard → Get Compute.

3. Each strength option is described in-app; choose what fits your play:

- With bad-hand tier 1–3 selected, only compute “High” is available, and it **takes effect in four-player rooms only**;
- With bad-hand “Off”, you can switch to “Low”.

V. Compute (Token) Consumption

On average, bad-hand tiers 1 / 2 / 3 consume an extra **10% / 15% / 20%**.

Four-player mahjong

Level	Single hand	East round	Hanchan
Low	500	2000	4000
High	1000	4000	8000

Three-player mahjong

Level	Single hand	East round	Hanchan
Low	450	1800	3600
High	900	3600	7200

Example: “High” with bad-hand tier 1 in a four-player East round: $4000 \times 10\% = 400$ extra.

VI. LDPlayer Emulator

1. Download LDPlayer from <https://www.ldmnq.com/>; after installing, click “Multi-instance” to open several emulators at once.

2. Click “Install” and select the APK file.

3. When the emulator desktop appears after installation, you are ready to go.
