

Weile Dou Dizhu (AI Assistant) · User Manual

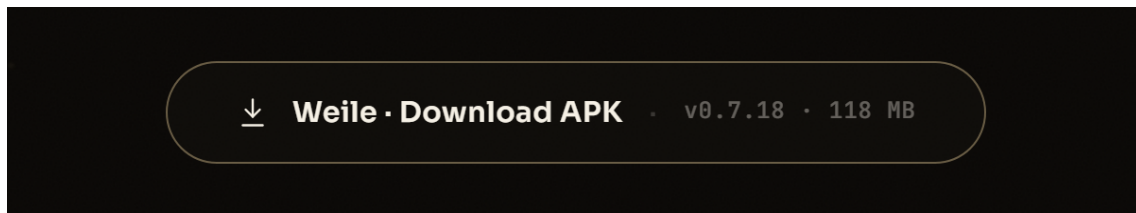

微樂鬥地主 AI 助手 · 使用手冊 · English

I. System Requirements

Requires a 64-bit phone running Android 8.0 or above. iOS is not supported; HarmonyOS is not guaranteed to work. On a PC you can use the LDPlayer emulator (see Section VI).

II. Download

Open the product page <https://deeplab.pro/en/products/doudizhu> and tap the download button shown below, then wait for the download to finish.

III. How to Log In

1. Open the game and complete the game login; a D-shield icon (blue box below) appears on the screen — this is the AI assistant entry.

2. Tap the D-shield icon and choose email login in the “DL AI Assistant” window: enter the email you registered and activated at <https://deeplab.pro/>, tap “Get code” , then enter the verification code to log in.

The image shows the 'DL AI 助手' (DL AI Assistant) account login interface. At the top, there's a title bar with 'DL AI 助手' and a close button. Below it, the title '账号登录' (Account Login) is centered. A yellow button labeled '邮箱登录' (Email Login) is prominent. Underneath, there are input fields for '邮箱' (Email) and '验证码' (Verification Code). A button labeled '获取验证码' (Get Verification Code) is next to the verification code field. At the bottom, a large yellow button labeled '登录' (Login) is centered.

IV. Settings

1. After logging in you will see three tabs: Profile, Settings and Log. Profile shows your compute balance, compute used, and how many sessions your balance covers (1 / 9 / 18 / 27 games).

The image shows the 'DL AI 助手' (DL AI Assistant) profile page. At the top, there's a title bar with 'DL AI 助手' and a close button. Below it, there are three tabs: '个人中心' (Personal Center), '设置' (Settings), and '日志' (Log). The '个人中心' tab is selected. The main content area displays the following information:

邮箱	复制
余额	605926
场次	预计可打 1局 2423场, 9局 302场 18局 201场, 27局 151场
已消耗	40

2. For AI assistance, log in on the <https://deeplab.pro/> homepage and go to Dashboard → Get Compute.
3. Dou Dizhu has a single AI strength — there is no tier to choose.

V. Compute (Token) Consumption

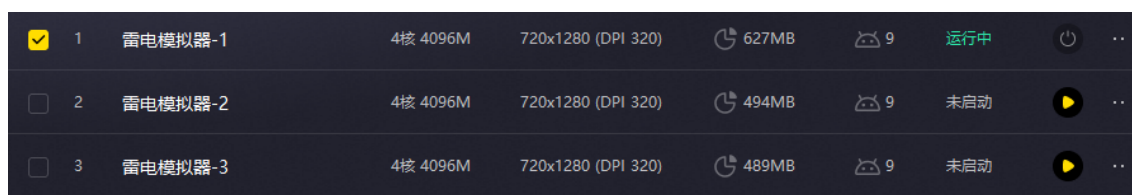

Matchmaking rooms are charged per game; friend rooms are charged per full session, deducted once when the session starts.

Room	Billing	Compute (points)
Matchmaking	Per game	250
Friend room · 9 games	Full session, charged at start	2000
Friend room · 18 games	Full session, charged at start	3000
Friend room · 27 games	Full session, charged at start	4000

Example: an 18-game friend room deducts 3000 points once when it starts; 4 matchmaking games consume $4 \times 250 = 1000$ points.

VI. LDPlayer Emulator

1. Download LDPlayer from <https://www.ldmnq.com/>; after installing, click “Multi-instance” to open several emulators at once.

2. Click “Install” and select the APK file.

3. When the emulator desktop appears after installation, you are ready to go.
