DEEPLAB · RIICHI AI

Riichi Mahjong AI Assistant · User Guide

日麻 AI 助手 · 使用手冊

English | Platforms: Mahjong Soul · Mahjong Hime | Android · LDPlayer

1 Before You Start

The DeepLab Riichi Mahjong AI assistant is **built into a dedicated game client** (a Mahjong Soul edition and a Mahjong Hime edition). Once you enter a game through the dedicated client, the AI reads the current game state and shows an action prompt above your hand (such as “Discard 1-man” or “Riichi”). **You make the move yourself**; the current version does not play automatically.

Platforms	Mahjong Soul and Mahjong Hime. **Both work exactly the same way**, for three-player and four-player games. The only difference: **Riichi Passes are bought separately** for each platform (Section 5).
Devices	Android 9 or above; on PC, use the LDPlayer emulator. HarmonyOS and iOS are not supported for now.
Account	Your DeepLab account (email address): sign up / log in at deeplab.pro. In the game, log in to the AI assistant with the same email and a verification code.
Payment	Two ways: **compute credits** (deducted per game, by level) or a **Riichi Pass** (Day / Week / Month). While your pass is active, Riichi AI assistance uses no extra compute credits (except in friendly matches). Section 5 helps you choose.

From download to your first game

① Download and install the dedicated client (Section 2) → ② Open the game and log in to the AI assistant with your DeepLab email (Section 3) → ③ Pick a compute level in Settings (Section 4) → ④ Get compute credits or a Riichi Pass (Section 5) → ⑤ Enter a game and follow the prompt above your hand (Section 6)

2 Download & Install

2.1 Get the dedicated client

1. Go to deeplab.pro → **Products** → **Riichi Mahjong** (deeplab.pro/en/products/mahjong).
2. In step 1 of “How it works”, **choose Mahjong Soul or Mahjong Hime first**, then tap “Get Mahjong Soul” or “Get Mahjong Hime”.
3. This is a dedicated client with AI built in, not the standard game client. After installing, enter games through this client.

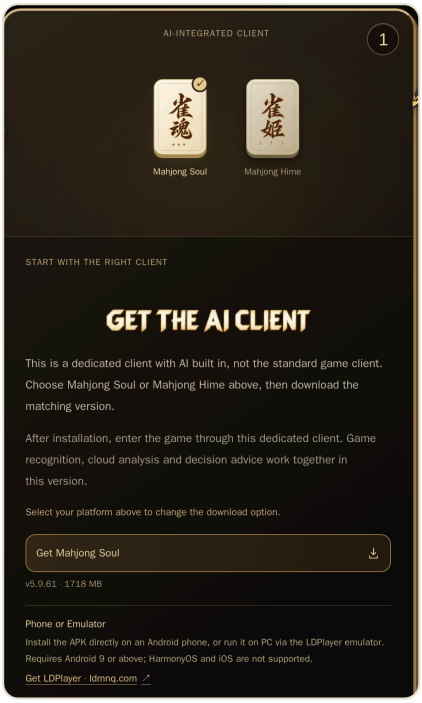

Fig. 2-1 Download area on the Riichi Mahjong page: choose a platform, then download (Riichi Mahjong page, captured 2026-11-13)

2.2 Install on a phone

Open the downloaded APK on your Android phone and follow the system prompts to install it.

2.3 On PC: LDPlayer emulator

1. Download LDPlayer from ldmnq.com. After installing, click “Multi-instance” (多开) to open several emulators.
2. Click “Install” (安装) on the right side of the emulator and choose the downloaded APK file.
3. When the game appears on the emulator desktop, you are ready to go.

Fig. 2-3 ① Multi-instance (多开) ② Install (安装) ③ choose the APK file

Black screen on LDPlayer 14

If you use LDPlayer 14 and the game shows a black screen after an update, just upgrade LDPlayer to the latest version. No need to reinstall.

3 Log In to the AI Assistant

LOGIN

1. Open the dedicated client and enter the game (sign up or log in to your game account).
2. Tap the shield icon on the game screen; it opens the AI assistant (see Fig. 3-1).
3. Enter your DeepLab email, get the verification code, enter it and tap **Log in** (登录).

Fig. 3-1 AI assistant entry: the shield icon (app screenshot)

Fig. 3-2 Login box (email masked) (app screenshot)

After logging in you will see the AI assistant panel with five tabs: Account (账号), Settings (设置), Feedback (反馈), Recharge (充值) and Plans (套餐). This guide uses three of them:

Tab	What it is for
Settings (设置)	Choose the compute level (Section 4).
Recharge (充值)	Top up compute credits directly and complete the payment as prompted on the page (5.4).
Plans (套餐)	Buy a Riichi Pass (5.3).

4 Settings: Choosing a Compute Level

Important

SETTINGS

The Settings (设置) tab has one option: **compute level** (算力强度), with three levels. The higher the level, the more complete the analysis and the more credits each game uses.

Fig. 4-1 Settings (设置): the three compute levels (app screenshot)

Level	In plain words
Normal (普通)	Basic advice; uses the fewest credits.
Advanced (高级)	A more complete analysis; each game uses 2× the credits of Normal.
Advanced · Deep Analysis (高级·深度分析)	Deeper analysis of the position, giving the most thorough and detailed decision reference; uses the most credits per game. The app marks it “**recommended**” (建议优先选择).

Which one?

Save credits → Normal. More complete advice → Advanced. The most thorough reference → Advanced · Deep Analysis. See the billing table in Section 5 for credits per game.

Cannot be changed at the table

The level cannot be changed during a game; a change takes effect from your next game after you leave the table. Choose before the game starts.

5 Paying: Compute Credits vs Riichi Pass

PAYMENT

5.1 At a glance

	Compute credits	Riichi Pass (Day / Week / Month)
How it is charged	Per game, by game mode and level (see 5.2)	While your pass is active, Riichi AI assistance uses no extra compute credits (except in friendly matches)
Friendly matches	Supported	**Not supported** (use compute credits)
Mahjong Soul / Hime	DeepLab compute credits are shared	**Bought separately, not interchangeable**; covers three- and four-player games on its platform
Where to buy	The app's Recharge (充值) tab, or "Buy credits" in the DeepLab account center	**In the app only** (Plans / 套餐 tab)
Good for	Mostly friendly matches, or a few games now and then	Playing other matches often, without counting credits per game

5.2 Compute credits per game

Game mode	Normal	Advanced	Advanced · Deep Analysis
3-Player East	1,800	3,600	4,200
3-Player South	3,600	7,200	8,600
4-Player East	2,000	4,000	4,800
4-Player South	4,000	8,000	9,000

Unit: credits per game. In the website billing table, "Strong" is the app's "Advanced" (高级) and "Deep analysis" is "Advanced · Deep Analysis" (高级·深度分析). The billing details on the Riichi Mahjong page (deeplab.pro/en/products/mahjong) prevail.

5.3 Riichi Pass (Day / Week / Month)

Pass	Valid for	Sale price	Regular price
Day Pass	24 hours	**¥9.9**	¥15
Week Pass	7 days	**¥57**	¥88
Month Pass	30 days	**¥184**	¥258

Same prices on both platforms. The discount is ongoing; the end date will be announced later. Prices in the app prevail.

Riichi Pass rules

- While your pass is active, Riichi AI assistance uses no extra compute credits. A pass takes effect from the time of purchase and is valid for 24 hours / 7 days / 30 days.
- **Friendly matches are the only exception**; every other match type is supported. Friendly matches use compute credits as usual.
- **Mahjong Soul and Mahjong Hime passes are sold separately and are not interchangeable**; on its platform a pass covers three- and four-player games.
- Passes can be bought in the app only: after logging in to the AI assistant, buy one in the panel's Plans (套餐) tab.
- Guest accounts must first bind an email address to become a full account before purchasing.
- A Riichi Pass may only be used by the account holder who bought it.
- Purchases made in error cannot be refunded. Please check the platform, pass type and duration before buying.
- Compute credits already in your account are not affected.

5.4 Buying compute credits

1. In the app panel's Recharge (充值) tab, top up compute credits directly and complete the payment as prompted on the page.
2. Or log in to the DeepLab account center and click "Buy credits". The payment page opens in a new tab; complete the payment there.
3. After payment, the credits appear in your account balance.

6 Using It at the Table

IN GAME

1. Enter a game through the dedicated client. The system reads the full game state and keeps analyzing as the game goes on.
2. Before you act, the AI shows an action prompt above your hand, such as "Discard 1-man" or "Riichi".
3. **Make the move in the game yourself.** Advice updates with the game state. Only action guidance is shown, not detailed analysis data.

Fig. 6-1 Action prompt above your hand (illustration) (Riichi Mahjong page, captured 2026-11-13)

> **Please note**
>
> The current version does not play automatically. You make every move yourself.

7 FAQ

FAQ

Question	Answer
What is the difference between a Riichi Pass and compute credits?	Credits are deducted per game by level; a pass uses no extra credits while active, but not in friendly matches. See 5.1.
Can I use a pass in friendly matches?	No. Friendly matches are the only exception; use compute credits there.
Can a Mahjong Soul pass be used in Mahjong Hime?	No. Passes for the two platforms are sold separately and are not interchangeable.
Can I get a refund if I bought the wrong pass?	No. Purchases made in error cannot be refunded; check the platform, pass type and duration before buying.
Can a guest account buy a pass?	Bind an email address first to become a full account, then you can buy.
Which level should I choose?	Normal to save credits; Advanced for more complete advice; Advanced · Deep Analysis for the most thorough reference (recommended in the app).
Can I change the level at the table?	No. It cannot be changed during a game; the change takes effect from your next game after you leave the table.
Will the AI play for me?	No. The current version does not play automatically; you make the moves.
LDPlayer shows a black screen. What now?	If you use LDPlayer 14 and the game goes black after an update, upgrade LDPlayer to the latest version. No need to reinstall.
